

Wireless VibeHound™ Express

Ordering information

Description

The **Wireless VibeHound™ Express** kit simplifies vibration measurements for test engineers. The Wireless VibeHound™ Express kit combines everything required to take NIST traceable vibration measurements into a battery driven low power wireless accelerometer 7034 and can be operated from a Windows PC. Internal to the 7034 unit is a precision piezoelectric sensor, temperature sensor, signal conditioning, microcontroller, data memory, NIST traceable calibration, and a license free 914MHz¹ wireless transceiver. 7043 Wireless Access Points (WAP) with USB plug-and-play interface operates with the unlimited number of accelerometers continuously.

¹ 869.85 MHz systems available on special request
